## GEOLOGY OF JPL

**Tuesday, November 15, 2005**  
**Noon to 1pm in the 171-218 conference room**

**SPEAKER:** Tom Farr

**DESCRIPTION:** This is your chance to ask a geologist all of your earth shattering questions about the geology of JPL. Is the rumor that the Sierra Madre fault is directly under the JPL emergency services building true? What are those black and white Dalmatian spotted rocks by building 183, and what does that have to do with the Imperial Valley? Will the east parking lot be under water if water fills to the top of the Devil's Gate Dam? Can you really see the Sierra Madre fault from the east gate bridge? What is a marine terrace and is the Mesa one? Are the buildings at JPL going to slide down the hill like the houses at Laguna Beach? Is JPL falling apart, geologically?

**NOTE:** if you do not have a JPL badge and would like to attend this slide show, you need to contact Mina at (818) 393-1621 in advance to arrange for lab access!
